#### Monthly commentary

With a flood of encouraging news suggesting better-than-expected economic growth prospects, August started off with rates and equities rising strongly side by side.

At that point, nothing seemed to stop equities from climbing to new highs as rates simultaneously showed confidence in future economic strength.

Against this backdrop, cyclical assets which are sensitive to the global business cycle were leading the market, such as British or Japanese stocks.

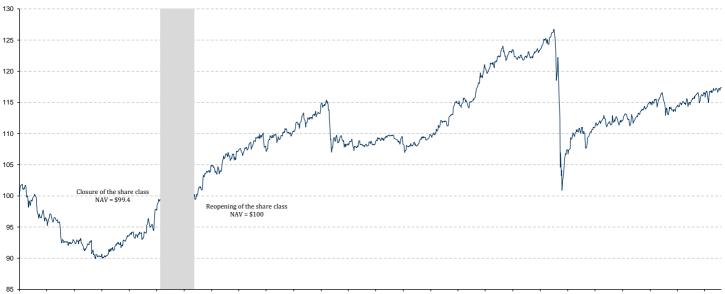

However, renewed doubts about the negative ramifications of the Covid Delta variant on global economic activity, briefly interrupted the bullish dynamic as rates and equities declined in sync.

In the last week of the month, the bullish primary trend re-emerged lifting both rates and equities higher.

Despite this volatility, YCAP Tactical Investment had another positive monthly performance.

A moderate equity allocation (beta of 35%) combined with a low duration (modified duration of 2.1) allowed the fund to avoid getting caught up in volatile rates and to achieve a positive monthly performance nonetheless.

### Monthly gross contributions to performance

Sources: HOMA CAPITAL; Bloomberg

Value at Risk (VaR): Represents the maximum loss expected on a financial asset over a given time period and for a given level of confidence. Two calculation methodologies:

- Historical model: the calculation is based on the asset's past returns, taken over a given timeframe. Parametric model: the calculation considers the expected return of the asset and
- its volatility level.
